

Set 14 – Survey Results

14.1 Stacked Bar Chart

Program:

```
responses <- matrix(c(1,1,1,0,
                      1,1,0,1,
                      1,0,1,0),
                    nrow=3,
                    byrow=TRUE)

colnames(responses) <- c("A","B","C","D")
rownames(responses) <- c("Respondent 1","Respondent 2","Respondent 3")

barplot(responses,
        beside=FALSE,
        col=c("red","green","blue"),
        legend.text=rownames(responses),
        xlab="Answers",
        ylab="Count",
        main="Distribution of Answers for Question 1")
```

Output:
